

Beschäftigungstiefe near Schönefeld

A business briefing for Thomas Graf's workforce question

BER+ Board Room · integrated page /beschaeftigung · IDI S26 · Tian Shao · Yushu Qin · Yi Li

XU University of Applied Sciences · June 2026

Indicative analysis — not official labour-market statistics

Executive summary

After the June 2026 Board Room presentation, **Thomas Graf** (Alpine Immobilien; BER+ 2. Vorsitzender) asked whether firms near Schönefeld employ enough people for new **Büro/Gewerbe** to succeed.

Our reframing. The question is not mainly about construction crews on site. It is about *Beschäftigungstiefe*: tenant depth, existing jobs in the corridor, and whether firms can recruit **Fachkräfte** from the wider Berlin–Brandenburg catchment.

What we did. We integrated a dedicated workforce briefing into **BER+ Board Room** (/beschaeftigung), linked from the map footer and Briefing tab. The page maps **215 named employers** from live OpenStreetMap data, cross-references public headcount where available, and applies a transparent **corridor employment model** for the remaining locations.

Headline findings (indicative).

- **BB Business Hub** (Alpine proof point): ~50 firms, ~800 employees on campus.
- **FBB** (airport operator): ~2,131 employees (2023 annual average, published).
- **643 gewerbe** / industrial OSM features in the Schönefeld bbox; **215** carry a business name.
- **102** sites had no public site-level count — modelled at **~4,075 jobs** (point estimates, see below).
- **Corridor footprint** (site-level + modelled + micro-estimates, *excluding* corporate HQs such as DHL global): order of magnitude **~11k–14k jobs** mapped as plausible local presence — transparency before strategy, not a finished GIS.

Recommendation. Publish this briefing on the neutral Board Room map; run a **90-day member validation** with Alpine and 3–5 anchor Mitglieder before any leasing narrative is treated as authoritative.

0. Integration in Board Room

The final version lives inside the main Next.js app — not a separate HTML demo.

1. Stakeholder question

Graf's campus reference — BB Business Hub — already demonstrates that a multi-tenant gewerbe location can host dozens of firms and hundreds of jobs. The open question for new Alpine projects is how that depth compares across the wider Schönefeld ribbon.

2. Evidence on one map

Data layers.

Layer	Business meaning	Cnt
OSM gewerbe features	Where economic activity is physically present	643
Named employers	Firms / outlets we can discuss with Mitglieder	215
Verified site / registry	Figures we can cite in a board deck	9
Corporate group match	Brand is present; HQ number is <i>not</i> local headcount	53
Modelled sites	Transparent estimate when no public filing exists	102
Micro-establishments	Professional services / small retail (range only)	51

Thomas Graf — Beschäftigungstiefe

Workforce depth near Schönefeld: live OSM employers, public cross-reference, and transparent corridor model (June 2026 stakeholder signal).

Evidence for June 12

Strategic option + corridor evidence — Module 1.0 answers grid and resilience pain today, not in 2045.

[Peer precedents & map benchmarks →](#)

IMPORTANT NEXT STEP • MEMBER ASSET INVENTORY

What actually belongs to BER+ members?

This Board Room map is step 1: indicative OSM + curated land anchors + member-linked highlights. Step 2 is a verified inventory co-built with Mitglieder.

[Try co-inventory demo →](#) [Step 1 - OSM Intel →](#)

Grid congestion, stalled growth

New users wait months–years for connection; investment stalls.

Single point of failure

Airport & industry depend on a fragile public grid; outages are high-impact.

Cost & compliance crisis

Figure 2: Integrated briefing page — reframing Graf’s “manpower” question as Beschäftigungstiefe (Playwright capture of /beschaeftigung).

3. Corridor employment model (business view)

Purpose: Give Graf a defensible **first answer** where public data stops — without pretending we have confidential HR files.

Three-step logic (not a black box).

1. **Start with what is published.** Annual reports, member news (BB Hub), and registry excerpts (FBB) anchor the narrative.
2. **Classify each named site by business type.** Logistics depots, Werkstätten, Gewerbeparks, airport buildings, and retail units face different typical staffing — informed by German Mittelstand structure (many small firms, few large plants).
3. **Apply a corridor context adjustment.** Locations closer to BER inherit slightly higher job density assumptions — reflecting the Flughafenregion labour market described in the 2025 FBB/WFBB/IHK study (**Fachkräftegewinnung** as top challenge, not absent workers).

Output format. For each of the 102 unreported sites we publish a **range** (conservative to optimistic) and a single **planning number** inside that range. Example anchors:

Location (OSM name)	Planning no.	Range
Gewerbepark Schönefeld	357	92–402
Logistikzentrum Airport Park Berlin	192	69–253
Briefzentrum 12 / Logistikzentrum Berlin Südost	171	69–253
Berlin ExpoCenter Airport	123	29–161

Full 102-row table in `public/data/graf/employee-predictions.json` and interactive briefing UI.

What we deliberately do *not* do.

- Sum DHL / REWE / Amazon **global** headcount as if they were Schönefeld site staff.
- Present modelled numbers as audited Beschäftigtenzahlen.
- Replace a BER+ member validation workshop.

4. Answer for Alpine / BER+ board

Is there “enough manpower”?

- **Yes for narrative credibility:** the corridor already hosts hundreds of named gewerbe sites, a validated airport employer (~2k FBB), and Alpine’s own BB Hub proof point (~800).
- **With caveats for leasing:** tenant recruitment depends on **Fachkräfte** mobility across ~6M Berlin–Brandenburg — not only on-site headcount.
- **Next credibility step:** member-validated firm-level numbers for Pilot-1 and 3–5 anchor Mitglieder (Alpine, SEGRO, BUWOG, WFG, Sector Seven).

Figure 4: Live OSM gewerbe layer — 643 features; named employers highlighted; BB Business Hub anchor.

Corridor model (three steps)

NAME	TYPE	EMPLOYEES	COUNT
Logistikzentrum Amazon	industrial	~1,500,000	PRESS
DHL	commercial	~480,000	WIKIDATA
E-Center	retail	~402,000	WIKIDATA
IDEKA	retail	~402,000	WIKIDATA
Netto Marken-Discount	retail	~402,000	PRESS
Netto Marken-Discount	retail	~402,000	PRESS
Netto Marken-Discount	retail	~402,000	PRESS
Netto Marken-Discount	retail	~402,000	PRESS
Penny	retail	~390,000	PRESS
REWE	retail	~390,000	PRESS
REWE	retail	~390,000	PRESS

Employer cross-reference table

Figure 5: Model explanation and searchable employer table with confidence badges.

Figure 6: Proposed 90-day pilot — map, validate, brief the board.

5. Sources & limitations

Sources: OpenStreetMap / Overpass (Schönefeld bbox, June 2026); Alpine / BER+ member news (BB Business Hub, Feb 2025); FBB Geschäftsbericht 2023; FBB/WFBB/IHK Flughafenregion labour study 2025; corporate annual reports / Wikidata for brand-level references only.

Limitations: OSM tags $\neq$ employee counts; model outputs are planning estimates; duplicate OSM nodes for the same facility are split; English briefing with German labour-market terms.
