

BER+ Coordination Map

Matching · visibility · corridor intelligence — ecosystem coordination, not command centres

BER+ Flughafenregion

Schönefeld corridor · Flughafenregion Berlin Brandenburg

12 June 2026

<https://ber-war-map.vercel.app/>

Agenda

- ① **The problem** — fragmented visibility in the Flughafenregion
- ② **Why now** — strategic choice & benchmarks
- ③ **Live demo** — company · investor · municipality on the map
- ④ **What BER+ does** — pilot phase, asset inventory, next steps

<https://ber-war-map.vercel.app/>

The problem — information is fragmented

- Available land and assets are **hard to discover** across the corridor
- Members see **only part** of the ecosystem — opportunities stay invisible
- Incoming requests are **hard to match** efficiently to the right peers
- Investors, companies, municipalities and partners **navigate in silos**

The audience should first think: *“Yes, this is a real problem.”*

Why this idea — visibility before matching

- **Why visibility matters** — gewerbe land, industry, power and transport in one regional picture
- **Why members struggle** — no shared inventory of who holds what, where opportunities sit
- **Why opportunities fragment** — each actor maintains partial lists, PDFs and personal networks
- **Then** — a neutral map hosted by BER+ can respond without replacing cadastral or planning roles

“Interesting — this could help.” only after the problem is clear.

Benchmarks — similar approaches create value

Type	Examples (not copies — credibility)
Regional development	Location portals, Invest-in regions, cluster maps
Innovation ecosystems	Startup / scale-up directories, EU innovation hub maps
Location intelligence	GIS land & infra layers for investors
Airport regions	Corridor coordination tools linking assets & members

We do not copy them — we show that **shared visibility already creates value elsewhere.**

Value proposition — for whom?

Beneficiaries

- Investors & developers
- Companies seeking locations
- Municipalities & public bodies
- BER+ Mitglieder
- Innovation & infrastructure partners

Concrete value

- Faster matching of inquiries
- Higher visibility of corridor assets
- More qualified introductions
- Stronger regional collaboration
- Shared Flughafenregion identity on one map

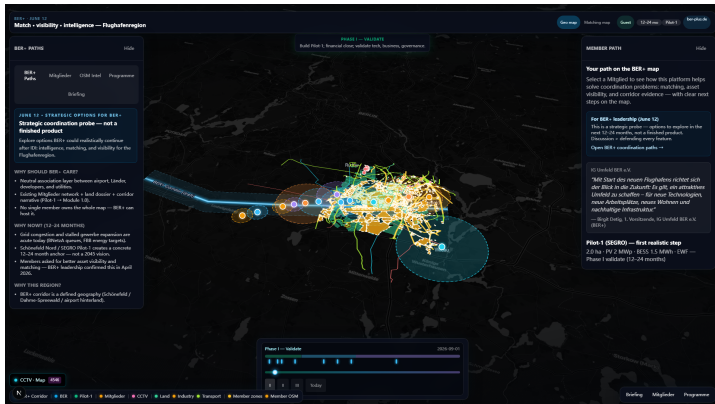

Why the corridor, why now

- Grid congestion and **Netzanschluss** shape where gewerbe can grow
- FBB / FEW resilience targets drive near-term investment choices
- **SEGRO Pilot-1** (2 ha) anchors Phase I on the map
- Members need a **shared response** to fragmentation — not another slide deck

Problem → solution

Problem	Platform response
Information fragmented	BER+ Coordination Hub — one briefing surface
Land hard to discover	OSM Intel + curated land anchors
Members see partial picture	Mitglieder graph + member focus
Requests poorly matched	Scored links + match review
Opportunities invisible	Matching map + Pass / Save queue

BER+ Coordination Hub — live overview

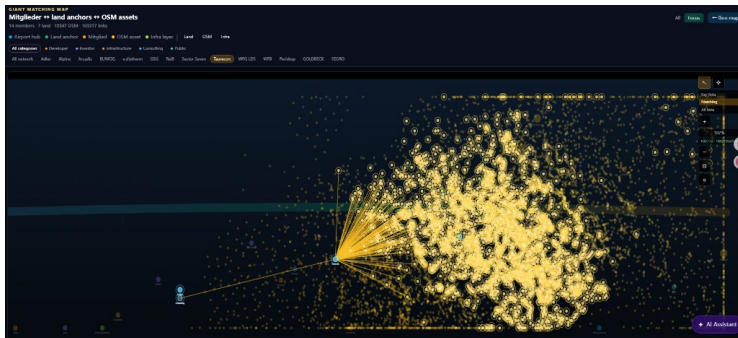

Ecosystem coordination

- Corridor ribbon & Pilot-1 timeline
- Mitglieder and influence zones
- OSM land, industry, power, transport
- Intelligence feed — not a war room

<https://ber-war-map.vercel.app/>

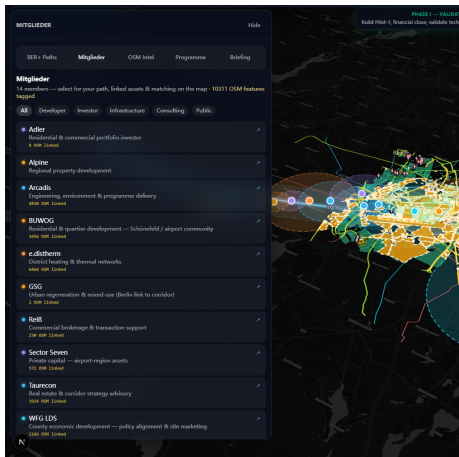

Demo — company seeking a location

Story on the map

- Filter corridor layers
- Member focus — scored links to land & OSM
- Match review — preview, Pass / Save
- *Less talk — show the prototype.*

Demo — investor seeking opportunities

14 Mitglieder — developer, investor, infrastructure, consulting, public

- See link density per Mitglied
- Compare paths: BUWOG, SEGRO, WFG
- Qualified intros — not cold outreach

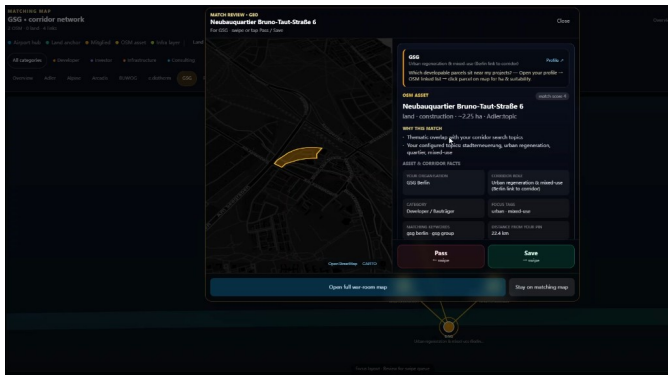

Demo — municipality & partners

OSM Intel

- Land parcels & suitability signals
- Industry, power, transport corridors
- Indicative layers — planning stays with authorities

Match review — decide on the map

Tap any asset in member focus:

- Embedded site preview
- Match score and rationale
- Pass / Save — stay in context

Next horizon — what belongs to members?

- Important follow-up: **member asset inventory**
- With Mitglieder, BER+ could build:
 - Land inventory infrastructure inventory
 - Development opportunity inventory
- Today's map is **step one** — visibility and matching on open & curated layers
- Pilot-1 (PV + BESS + EWF) anchors the programme timeline on the same surface

What BER+ must do — pilot phase

- **Collect** — member profiles, priorities, asset claims
- **Validate** — locations and links with members (Arcadis, WFG, etc.)
- **Define** — ownership of data refresh and matching rules
- **Maintain** — quarterly OSM refresh, review queue
- **Host** — neutral BER+ Coordination Hub for board and member sessions

The platform is not magic — BER+ makes it real.

Future phase — how the platform evolves

- Verified **member asset registry** linked to the map
- Matching at scale — more Mitglieder, more rules, more exports
- Embedded in BER+ briefings, investor days, municipality sessions
- Intelligence packs and advocacy evidence from live map exports

Goal: “We could start building this tomorrow.”

Questions for the room

- ① Does the **problem framing** match your experience in the region?
- ② Which 3–5 Mitglieder pilot verified links first?
- ③ Who owns the **asset inventory** conversation with members?
- ④ First joint step after Pilot-1 — hosting MOU, data refresh, matching group?

Summary

- **Problem first** — fragmented visibility; **response** — Coordination Map
- **Live today:** <https://ber-war-map.vercel.app/>
- **Next:** pilot members, asset inventory dialogue, host the Hub

Thank you
